Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

mailroom@bskb.com

Office Action Summary	Application No. 10/813,096	Applicant(s) KUO ET AL.	
	Examiner Jennifer Zubajlo	Art Unit 2629	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 24 July 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-17 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-17 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 31 March 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Philippe Junod (Patent Number 5,854,621) in view of Shigenobu Maeda (Pub. No.: US 2004/0005052 A1).
2. As to claims 1 and 7, Junod teaches a system and method for a wireless human receiving device, wherein said wireless human receiving device is connected to a computer (see Abstract, column 2 lines 51-56, column 5 lines 40-47); a wireless human transmitting device (see column 2 lines 19-21, column 5 lines 40-47), at least further including a micro controller (inherent that a computer will have a CPU which will have a microcontroller) for automatically generating said predetermined identification code (see column 9 lines 8-17), wherein said wireless human transmitting device is transmitting at least a packet containing said predetermined identification code to said wireless human receiving device during being set up for the first time (see Abstract).

Junod doesn't teach including a non-volatile memory for storing a predetermined identification code or a plurality of program codes, being executed by said computer for detecting if said wireless human receiving device can receive normally for reading said memory of said wireless human receiving device in case of normal receiving being detected, comparing the predetermined identification code to said read data and outputting a message of said wireless human input device being normally operated if a result being true after comparison; whereby, after completing the first time set-up, a

user of said wireless human transmitting device and said wireless human receiving device can confirm said wireless human transmitting device and said wireless human receiving device having been normally set up already via said output message of said computer.

Maeda teaches including a non-volatile memory for storing a predetermined identification code (see figures 7 & 8 and [0015] & [0219]-[0220]) and a plurality of program codes, being executed by said computer for detecting if said wireless human receiving device can receive normally for reading said memory of said wireless human receiving device in case of normal receiving being detected, comparing the predetermined identification code to said read data and outputting a message of said wireless human input device being normally operated if a result being true after comparison (see Abstract, [0019], [0021], [0055], and [0334]); whereby, after completing the first time set-up, a user of said wireless human transmitting device and said wireless human receiving device can confirm said wireless human transmitting device and said wireless human receiving device having been normally set up already via said output message of said computer (see [0335] and [0337]).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the system and method for automatically generating a predetermined identification code via a wireless human receiving device connected to a computer and a wireless human transmitting device taught by Junod with a non-volatile memory for storing the predetermined identification that can be changed by user and used for detection of normal receiving by comparing the predetermined identification

code to read data and outputting a message of normal operation if a result of true after comparison taught by Maeda. This combination would have been obvious because it is known that non-volatile memory is used to retain stored information even when not powered and the identification code would need to be stored at all times.

As to claims 2 and 8 (dependent on 1 and 7 respectfully), Junod teaches output message to be shown on a display (see [0335] and [0337]).

As to claims 3, 4 (dependent on 1) and 9, 10 (dependent on 7), Junod teaches the wireless human transmitting device to be one of a wireless mouse transmitting device, a wireless keyboard transmitting device, a wireless joy stick transmitting device and a wireless pointing transmitting device (see column 3 lines 2-9, column 4 lines 13-19) and the wireless human receiving device to be one of a wireless mouse receiving device, a wireless keyboard receiving device, a wireless joy stick receiving device and a wireless pointing receiving device (column 2 lines 51-56).

As to claims 5 and 6 (dependent on 1) and 11, 12 and 13 (dependent on 7), Junod teaches new identification code automatically generated from micro controller (inherent that a computer will have a CPU which will have a microcontroller) of wireless human transmitting devices (see column 9 lines 8-17).

Junod doesn't teach a system and method that use program codes to direct user to change a new identification code number different from said predetermined identification code, wherein the memory of the wireless human receiving device is used for storing said new identification code or allowing the memory of the human receiving

Art Unit: 2629

device to store the predetermined identification code via executing said program codes by the computer.

Maeda teaches a system and method that use program codes to direct user to change a new identification code number different from said predetermined identification code, wherein the memory of the wireless human receiving device is used for storing said new identification code and allowing the memory of the human receiving device to store the predetermined identification code via executing said program codes by the computer (see [0015], [0025], [0057], & [0219]-[0220] and figures 7 & 8).

3. As to claims 14-17, Junod teaches a wireless human input device with a wireless human receiving device connected to a computer (see Abstract, column 2 lines 51-56, column 5 lines 40-47) and a wireless human transmitting device, at least including a micro controller (inherent that a computer will have a CPU which will have a microcontroller) for automatically generating said predetermined identification code (see column 9 lines 8-17). Junod also teaches a wireless human transmitting device being one of a wireless mouse transmitting device, a wireless keyboard transmitting device, a wireless joy stick transmitting device and a wireless pointing transmitting device (see column 3 lines 2-9, column 4 lines 13-19) and a wireless human receiving device being one of a wireless mouse receiving device, a wireless keyboard receiving device, a wireless joy stick receiving device and a wireless pointing receiving device (Junod - column 2 lines 51-56).

Junod doesn't teach a non-volatile memory for storing a predetermined identification code or an output message shown on the computer's display.

Maeda teaches a non-volatile memory for storing a predetermined identification code (see figures 7 & 8 and [0015] & [0219]-[0220]) and an output message shown on the computer's display (see Abstract, [0019], [0021], [0055], and [0334], [0035], and [0037]).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the wireless human receiving device connected to a computer and a wireless human transmitting device for generating predetermined identification code taught by Junod with a non-volatile memory for storing the predetermined identification code and an output message shown on computer's display taught by Maeda. This combination would have been obvious because it is known that non-volatile memory is used to retain stored information even when not powered and the identification code would need to be stored at all times.

Response to Arguments

4. Applicant's arguments with respect to claims 1-17 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

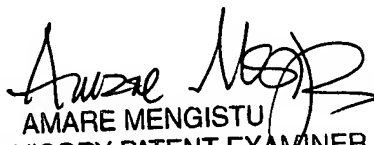

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2629

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jennifer Zubajlo whose telephone number is (571) 272-2222. The examiner can normally be reached on Monday-Friday, 8 am - 5 pm, EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Amare Mengistu can be reached on (571) 270-1550. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
